

# AI Support QA Sample Scorecard

## AI Support QA Sample Scorecard

Use this sample scorecard to evaluate AI chat or voice interactions for customer support quality, trust, and operational risk.

1. Intent and context recognition: Did the AI identify the customer issue, urgency, account context, and next best action?
2. Accuracy and policy adherence: Was the answer grounded in approved policy, product rules, and available customer/account data?
3. Resolution quality: Did the interaction reduce customer effort and move toward a correct resolution?
4. Escalation handling: Did the AI detect edge cases, risk, frustration, or policy limits and hand off with useful context?
5. Conversation quality: Was the response clear, empathetic, concise, and free of looping or irrelevant content?
6. Failure mode detection: Flag hallucination, unsupported confidence, incorrect resolution, missing policy, repeated prompts, or poor handoff.
7. Business insight: Capture repeated defects, policy gaps, prompt issues, automation opportunities, and CSAT/containment risks.

## Suggested scoring

Score each category from 1 to 5. Review any interaction scoring below 3 for root cause, escalation rule updates, prompt improvements, policy documentation, or product feedback.
